

HELP KEEP WILDLIFE WILD!

Why feeding geese, ducks and wildlife is harmful:

1 Causes a reliance on human feeding that does more harm than good.

2 Geese feces increase water pollution and reduce use of passive recreation areas.

3 Reduces fear of humans leading to dangerous interactions and disease transmission.

4 Encourages goose population to stay in the parks leading to delayed or altered migration patterns.

Please learn more about the impacts human feeding can have on the individual animals, animal population, human park visitors and our environment:
